APPLICATION/REPORT OF WASTE DISCHARGE GENERAL INFORMATION FORM FOR WASTE DISCHARGE REQUIREMENTS OR NPDES PERMIT

VI. OTHER REQUIRED INFORMATION

Please provide a COMPLETE characterization of your discharge. A complete characterization includes, but is not limited to, design and actual flows, a list of constituents and the discharge concentration of each constituent, a list of other appropriate waste discharge characteristics, a description and schematic drawing of all treatment processes, a description of any Best Management Practices (BMPs) used, and a description of disposal methods.

Also include a site map showing the location of the facility and, if you are submitting this application for an NPDES permit, identify the surface water to which you propose to discharge. Please try to limit your maps to a scale of 1:24,000 (7.5' USGS Quadrangle) or a street map, if more appropriate.

VII. OTHER

Attach additional sheets to explain any responses which need clarification. List attachments with titles and dates below:

You will be notified by a representative of the RWQCB within 30 days of receipt of your application. The notice will state if your application is complete or if there is additional information you must submit to complete your Application/Report of Waste Discharge, pursuant to Division 7, Section 13260 of the California Water Code.

INFORMATION SHEET

MADERA COUNTY MAINTENANCE DISTRICT NO. 6
LAKESHORE PARK
MADERA COUNTY

Lakeshore Park is a residential development on the eastern shore of Bass Lake in Madera County. Madera County Maintenance District No. 6 owns and operates a package treatment system for the subdivision. Wastewater is received from the development, treated, and then pumped to an area about 2,000 feet (609.6 m) from the lake front for disposal by spray irrigation.

The treatment facility itself consists of a settling tank, a newly enlarged aeration basin, a secondary clarifier, and chlorination equipment. The larger structure was installed to accommodate larger flows from the development. Design flow for the plant is now 25,000 gpd (1.10 l/sec). Thirty-three service connections are currently included in the system, and daily flows currently average 18,000 gpd (0.79 l/sec). Influent fluctuates on a weekly basis as several of the connections are to rental units.

Local ground waters are the source of the water supply for the subdivision. Depth-to-ground water from water well drillers' logs ranges from 27 to 485 feet (8.3 to 147.8 m). Yields average 2 gpm (0.1 l/sec). Rock formations include black, white, and decomposed granite. Water quality records are not well documented, but three public water companies operate in the area. Department of Water Resources' water quality records indicate electrical conductivities ranging from 129 to 700 micromhos/cm.

This is an existing facility, and as such the action of adopting waste discharge requirements is categorically exempt from the provisions of the California Environmental Quality Act in accordance with Section 15301, Title 14, Chapter 3, California Administrative Code.
