

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL VALLEY REGION

ORDER NO. 82-006

WASTE DISCHARGE REQUIREMENTS
FOR
THE TULARE COUNTY HOUSING AUTHORITY
WOODVILLE FARM LABOR CENTER
TULARE COUNTY

The California Regional Water Quality Control Board, Central Valley Region, (hereafter Board) finds that:

1. The Tulare County Housing Authority (hereafter Discharger), which operates the Woodville Farm Labor Center, submitted a report of waste discharge, dated 5 April 1978.
2. The Woodville Farm Labor Center is located seven miles (11.3 km) west of Porterville in Section 22, T21S, R26E, MDB&M.
3. The existing waste treatment facility consists of an Imhoff tank, trickling filter and clarifier, with final disposal to three stabilization ponds covering 1.2 acres (0.49 ha). Design average daily flow of the facility is 0.09 mgd (4.4 l/sec) with present average daily flow at approximately 0.09 mgd (4.4 l/sec).
4. The Board, on 20 March 1970, adopted Order No. 70-138 which prescribed requirements for a discharge from the Woodville Farm Labor Center wastewater treatment facility to evaporation-percolation ponds. Order No. 70-138 is no longer adequate nor consistent with plans and policies of the Board.
5. The Discharger is currently in the process of upgrading the existing facility by means of a Clean Water Grant Project.
6. The new treatment facility will consist of a rehabilitated Imhoff tank, pump station and expansion of the stabilization ponds to 4.8 acres (1.94 ha). Construction is scheduled to begin around 1 September 1981. Design average daily flow will be 0.12 mgd (5.3 l/sec).
7. The beneficial uses of ground water are municipal, industrial, and agricultural supply.
8. The Board, on 25 July 1975, adopted a Water Quality Control Plan for the Tulare Lake Basin (5D) which contains water quality objectives. These requirements are consistent with that Plan.
9. The Tulare County Housing Authority has adopted a final environmental impact report in accordance with the California Environmental Quality Act (Public Resources Code Section 21000, et seq.), and the State Guidelines.

WASTE DISCHARGE REQUIREMENTS
THE TULARE COUNTY HOUSING AUTHORITY
WOODVILLE FARM LABOR CENTER
TULARE COUNTY

-2-

10. The Board has reviewed the EIR and concurs there are no significant impacts on water quality.
11. The Board has notified the Discharger and interested agencies and persons of its intent to prescribe waste discharge requirements for this discharge and has provided them with an opportunity to submit their written views and recommendations.
12. The Board, in a public hearing, heard and considered all comments pertaining to the discharge.

IT IS HEREBY ORDERED, that Order No. 70-138 be rescinded and the Tulare County Housing Authority, Woodville Farm Labor Center, in order to meet the provisions contained in Division 7 of the California Water Code and regulations adopted thereunder, shall comply with the following:

A. Discharge Prohibitions:

1. The direct discharge of wastes to surface waters or surface water drainage courses is prohibited.
2. The by-pass or overflow of untreated or partially treated waste is prohibited.

B. Discharge Specifications:

1. Neither the treatment nor the discharge shall cause a pollution or nuisance as defined by the California Water Code, Section 13050.
2. The discharge shall not cause degradation of any water supply.
3. The 30-day average daily dry weather discharge shall not exceed 0.12 mgd (5.3 l/sec).
4. The dissolved oxygen content in any pond shall not be less than 1.0 mg/l for 16 hours in any 24-hour period.
5. The specific electrical conductance of the discharge shall not exceed 1000 micromhos/cm.

C. Provisions:

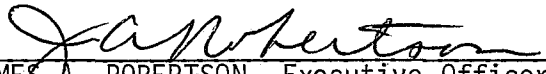

1. The Discharger shall comply with the attached Monitoring and Reporting Program No. 82-006.
2. The Discharger shall comply with the Standard Provisions and Reporting Requirements, dated 21 September 1979, which are part of this Order.

WASTE DISCHARGE REQUIREMENTS
THE TULARE COUNTY HOUSING AUTHORITY
WOODVILLE FARM LABOR CENTER
TULARE COUNTY

-3-

3. The Discharger shall report promptly, to the Board, any material change or proposed change in character, location, or volume of the discharge.
4. The Discharger shall implement appropriate measures to preclude public access from the facility.
5. In the event of any change in control or ownership of land or waste discharge facilities presently owned or controlled by the Discharger, the Discharger shall notify the succeeding owner or operator of the existence of this Order by letter, a copy of which shall be forwarded to this office.
6. The Board will review this Order periodically and may revise requirements when necessary.

I, JAMES A. ROBERTSON, Executive Officer, do hereby certify the foregoing is a full, true, and correct copy of an Order adopted by the California Regional Water Quality Control Board, Central Valley Region, on 22 January 1982.

JAMES A. ROBERTSON, Executive Officer

CALIFORNIA REGIONAL WATER QUALITY CONTROL BOARD
CENTRAL VALLEY REGION

MONITORING AND REPORTING PROGRAM NO. 82-006
FOR
THE TULARE COUNTY HOUSING AUTHORITY
WOODVILLE FARM LABOR CENTER
TULARE COUNTY

The Discharger shall implement the following monitoring and reporting program upon adoption of this Order.

EFFLUENT MONITORING

Representative samples shall be collected at the treatment facility according to the specified frequency:

<u>Measurement</u>	<u>Unit</u>	<u>Type of Sample</u>	<u>Frequency</u>
Total Daily Flow	MGD (1/sec)	Continuous	Daily
Dissolved Oxygen ^{1/}	mg/l	Grab	2/Week
Specific Electrical Conductance @25°C	umhos/cm	Grab	Monthly

1/ Sample to be collected from a location opposite each pond inlet between the hours of 0800 and 0900.

REPORTING

Monitoring reports shall be submitted monthly to the Board by the 15th day of the following month. In reporting the monitoring data, the Discharger shall arrange the data in tabular form so that the date, the constituents, and the concentrations are readily discernible. The data shall be summarized in such a manner to illustrate clearly the compliance with waste discharge requirements.

The Discharger shall submit with the initial report, a diagram indicating the location of the sampling stations in relation to the treatment facility.

Ordered by

JAMES A. ROBERTSON, Executive Officer

INFORMATION SHEET

THE TULARE COUNTY HOUSING AUTHORITY
WOODVILLE FARM LABOR CENTER
TULARE COUNTY

The Tulare County Housing Authority operates the Woodville Farm Labor Center which is located in Section 22, T21S, R26E, MDB&M, approximately seven miles (11.3 km) west of Porterville. The sewage treatment facility serving the Center was originally constructed in 1940 and is now severely deteriorated.

The existing treatment facility consists of prechlorination facilities, a pump station, Imhoff tank, trickling filter, final clarifier, three stabilization disposal ponds covering 1.2 acres (0.49 ha), and an open sludge drying bed. Components of the Imhoff tank, trickling filter, and prechlorination installation are presently inoperable.

Treatment and disposal facilities have a design average daily flow of 0.09 mgd (4.4 l/sec) and serve approximately 1,016 residents occupying 174 housing units. Present average daily flow is approximately 0.09 mgd (4.4 l/sec).

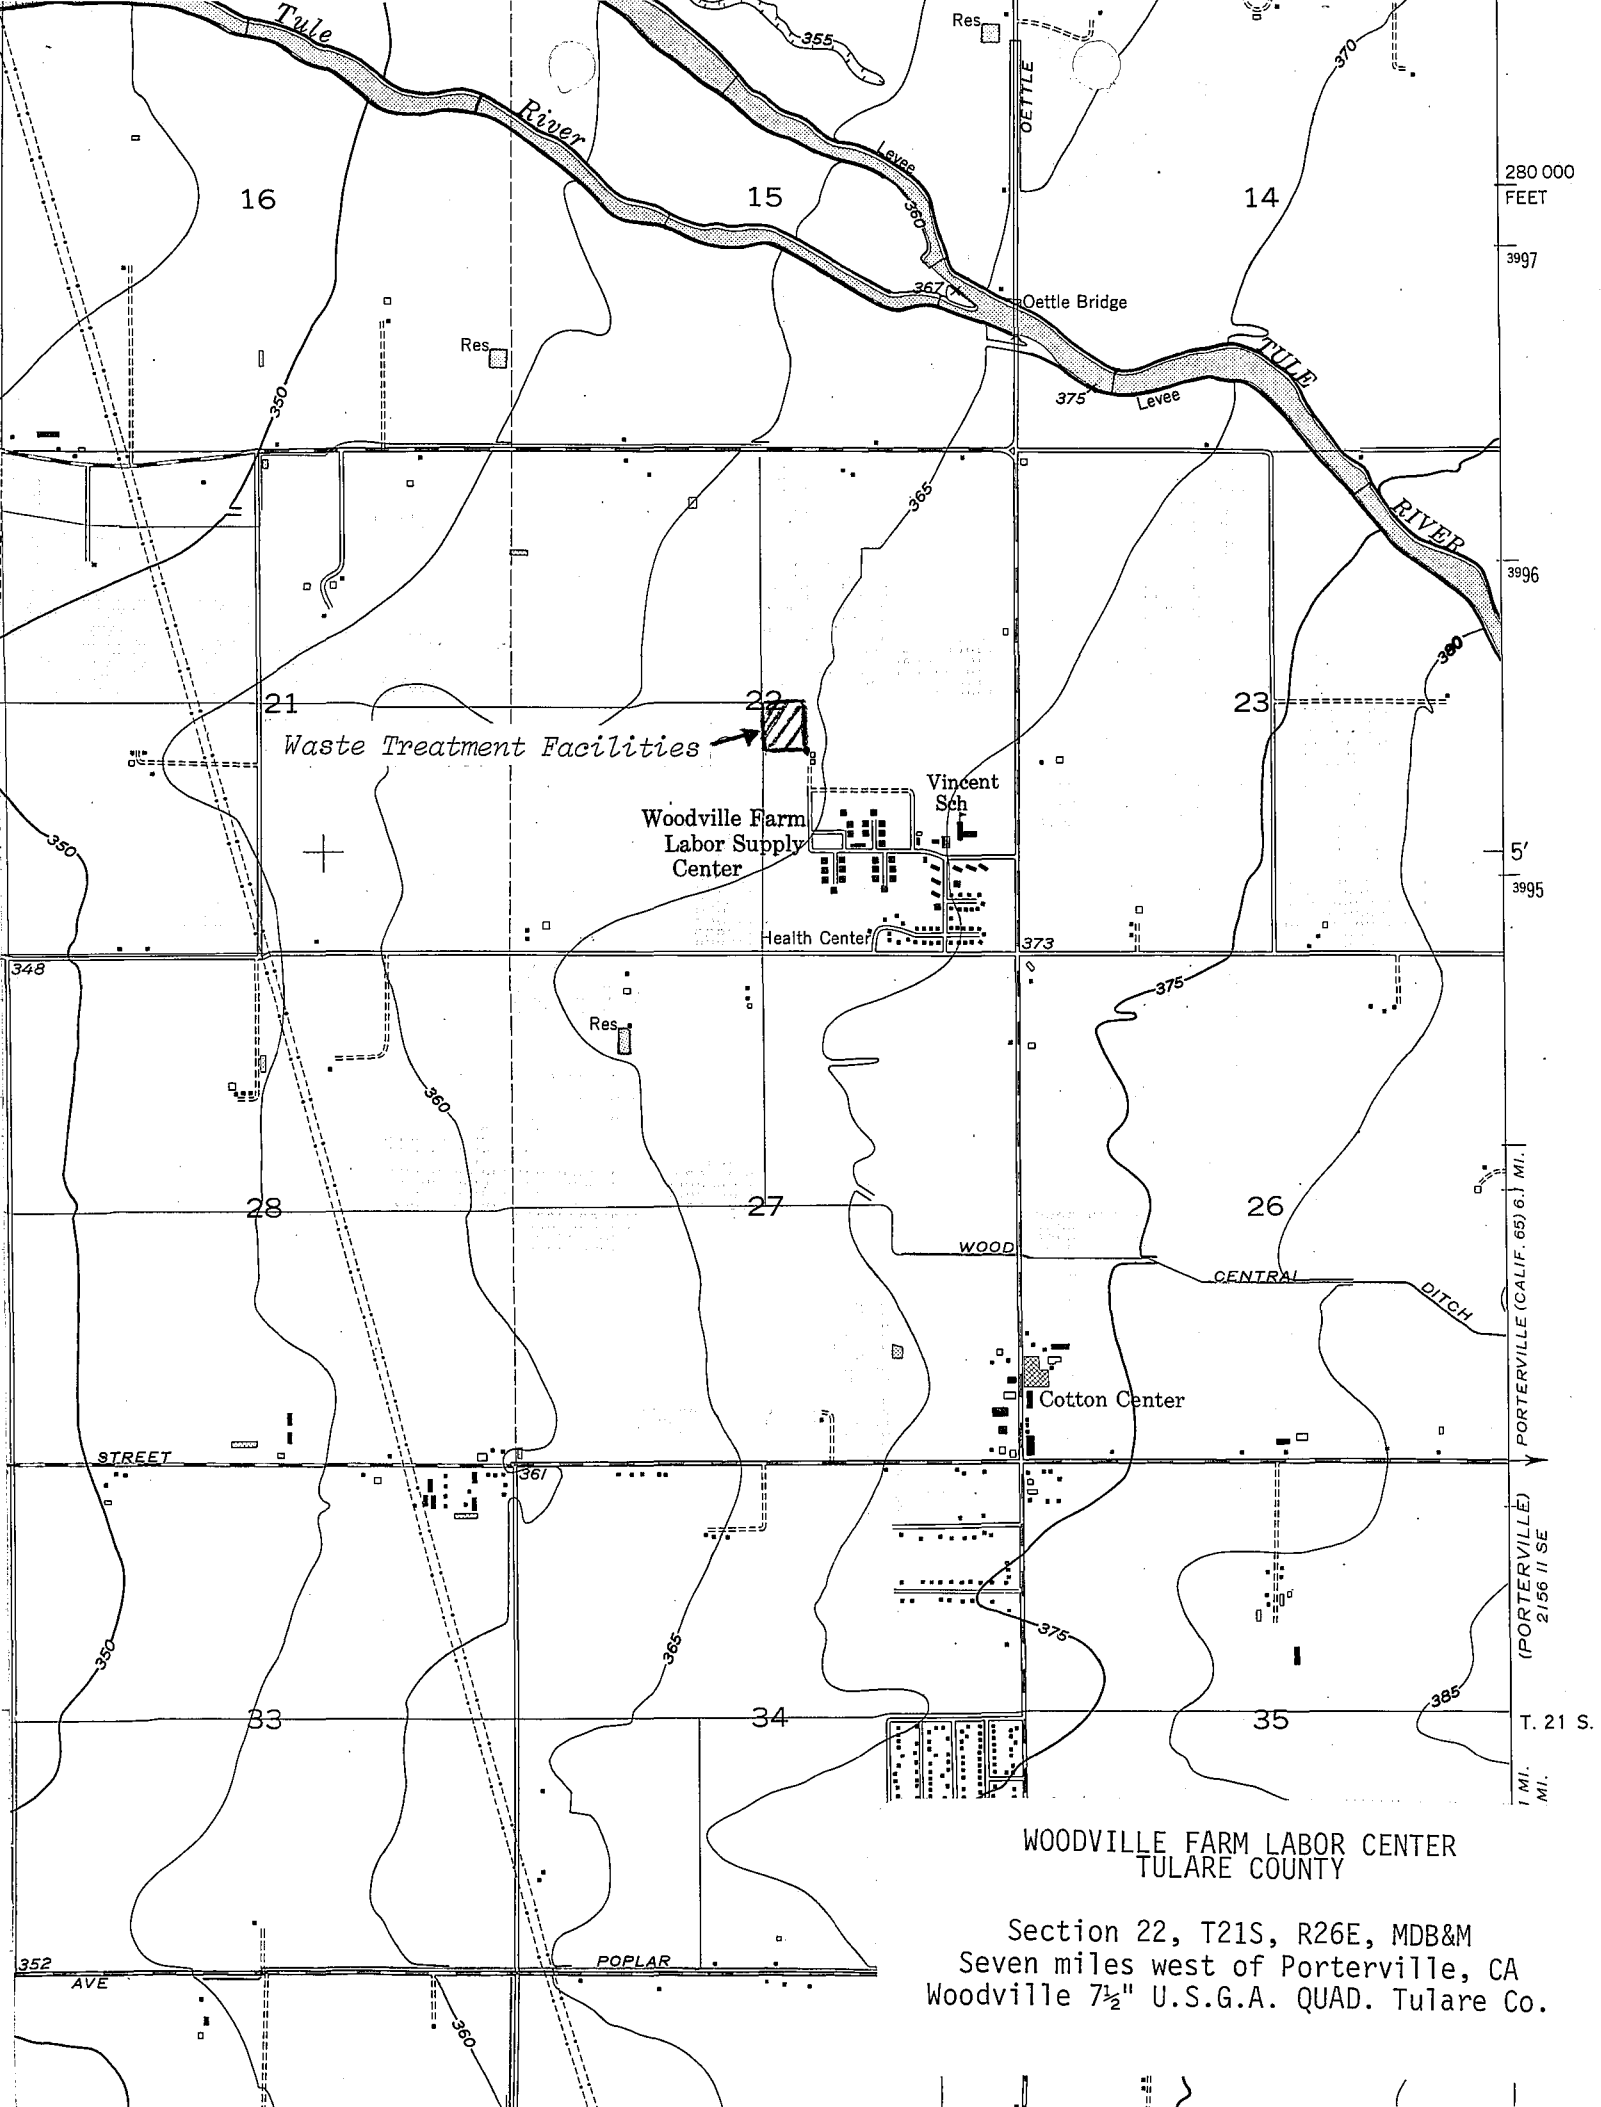

The Discharger is currently involved in a Clean Water Grant Project to upgrade the facility. The proposed treatment facilities will consist of rehabilitating the Imhoff tank and the influent pump station, abandoning the trickling filter and secondary clarifier, and discharging the effluent directly from the Imhoff tank to a three-cell stabilization pond covering 5.23 surface acres (2.1 ha). The final disposal ponds will be increased to 1.83 surface acres (0.7 ha) to provide adequate percolation capacity. The proposed facility would have a design average daily flow of 0.12 mgd (5.3 l/sec) to accommodate a design population of 1,316 persons.

Soils in the area are identified as Cajon sandy loam which are considered relatively permeable and highly favorable for crops because of its good drainage characteristics. Hardpan lies at a depth of 4 to 6 feet (1.2 to 1.8 m) below ground surface in this area.

Depth of ground water in this area in the spring in 1979 was approximately 70 feet (21 m). The mineral quality of local ground water is considered excellent with specific electrical conductance of approximately 340 micromhos.

An Environmental Impact Report was prepared for the project during June 1979. The Regional Board has reviewed the EIR and concurs with the findings that no significant environmental impacts would be caused by the project.
