REVISED MONITORING AND REPORTING PROGRAM 95-263, FRESNO COUNTY SERVICE AREA 31-B, SHAVER LAKE WWTF, FRESNO COUNTY

Fresno County owns and operates the Fresno County Service Area 31-B (CSA 31-B) wastewater treatment facility (WWTF) and conduct activities that result in a discharge of waste.

Waste Discharge Requirements Order 95-263 (WDRs) for CSA 31-B currently regulates the facility's discharge of waste to land. The WDRs incorporate Monitoring and Reporting Program 95-263 (MRP), which requires monthly self-monitoring reports be submitted pursuant to California Water Code section 13267 by the 20th of the month following sample collection, and an annual report by 31 January of each year. By 27 January 2009 e-mail, the County requested the MRP be modified to extend the monthly report deadline to the 25th of the month following monitoring. The County explained the additional time is necessary to compile the information required for the reports. This request is reasonable.

By this letter, the County is hereby notified that monitoring reports required by the WDRs shall be submitted as follows:

Monthly monitoring reports shall be submitted by the **1st** day of the second month following each calendar month (e.g., the January Report is due by 1 March) and annual reports shall be submitted by **1 February**.

This change shall be effective beginning **1 February 2009**.

All monitoring reports submitted to the Central Valley Water Board pursuant to WDRs Order 95-263 must be properly certified and signed. The following signatory clause and an appropriate signature must be included with all monitoring reports:

I certify under penalty of law that I have personally examined and am familiar with the information submitted in this document and all attachments and that, based on my inquiry of those individuals immediately responsible for obtaining the information, I believe that the information is true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment.

Monitoring reports specified above are requested pursuant to California Water Code section 13267. Failing to furnish the reports by the specified deadlines and/or falsifying information in the reports, are misdemeanors that may result in assessment of civil liabilities against the County.

California Environmental Protection Agency

Please include the following information in all monitoring and annual reports, as well as any report transmittal letters, submitted to the Central Valley Water Board:

Your agency or business name, facility name, WDRs Order number, and contact information (telephone number and e-mail address, if available).

Laboratory analysis reports should be included, but do not take the place of a self-monitoring report. Reports must submit monitoring data in tabular form so that dates, constituents, and concentrations are readily discernable. In general, reports should summarize monitoring data collected over the reporting period in a manner that clearly illustrates whether the discharge complies with specified limits contained in the WDRs (e.g., maximum daily and monthly average discharge flow limits). Daily maximums for the reporting month, as well as monthly and weekly averages, as appropriate, should be determined and reported along with the limits specified in the WDRs. Where the discharge monitoring data indicate that the discharge is not compliant with prescribed specifications, the monitoring report should provide an explanation for the noncompliance and a description of corrective measures taken or planned to achieve and maintain compliance.

This letter to revise the MRP incorporated in WDRs Order 95-263 has been entered into the California Integrated Water Quality System database as Regulatory Measure 360271.

If you have any questions regarding this matter, please telephone Daniel Benas at (559) 445-5500.
