APPROVAL OF UPDATED CLIMATE CHANGE EFFECTS VULNERABILITY ASSESSMENT AND MITIGATION PLAN FOR WASTE DISCHARGE REQUIREMENTS AND NATIONAL POLLUTANT DISCHARGE ELIMINATION SYSTEM (NPDES) PERMIT, JOINT OUTFALL SYSTEM, LONG BEACH WATER RECLAMATION PLANT (NPDES PERMIT NO. CA0054119, ORDER NO. R4-2022-0032, CI-5662)

Dear Lysa Gaboudian:

Order No. R4-2022-0032 for the Long Beach Water Reclamation Plant (LBWRP) requires the Joint Outfall System (JOS) to submit a Climate Change Effects Vulnerability Assessment and Mitigation Plan twelve months after the effective date of the Order (March 31, 2023). On February 2, 2023, the Los Angeles Regional Water Quality Control Board (Los Angeles Water Board) received the Climate Change Vulnerability Assessment and Management Plan (Climate Change Plan) from the JOS. This Climate Change Plan identifies and assesses the climate change vulnerabilities of the LBWRP in categories of flood, wildfire, extreme temperatures, drought, and high winds, and presents the existing and additional resilience measures to address these vulnerabilities. The resilience measures are integral to the design and operation of the LBWRP and are intended to ensure the LBWRP operations are not disrupted, the discharge continues to comply with permit conditions, and receiving waters are not adversely impacted by the discharge. The Climate Change Plan also contains three parts, including one part for the LBWRP, one part for the Sewer Collection System of the JOS, and one part for the Marina Pumping Plant No. 2.

On July 5, 2023, the Los Angeles Water Board provided comments on the Climate Change Plan and received an updated Climate Change Plan on October 30, 2023. The Los Angeles Water Board has reviewed the updated Climate Change Plan and finds the JOS addressed all comments. The Los Angeles Water Board hereby approves the updated Climate Change Plan dated October 30, 2023. Please upload the final document to the California Integrated Water Quality System (CIWQS) as soon as possible.
