NOTICE OF APPLICABILITY

WATER QUALITY ORDER 97-10-DWQ, GENERAL WASTE DISCHARGE REQUIREMENTS FOR DISCHARGES TO LAND BY SMALL DOMESTIC WASTEWATER TREATMENT SYSTEMS, FRESNO COUNTY WATERWORKS DISTRICT NO. 40, SHAVER SPRINGS WASTEWATER TREATMENT FACILITY, FRESNO COUNTY

Fresno County Waterworks District No. 40 (hereafter Discharger) currently discharges secondary treated effluent from Shaver Springs Wastewater Treatment Facility (WWTF) to land. Waste Discharge Requirements (WDRs) Order 83-010 currently regulates the discharge. The WDRs are obsolete, inconsistent with current plans and policies of the California Regional Water Quality Control Board, Central Valley Region (Central Valley Water Board), and need to be updated.

On 3 October 2013, the Central Valley Water Board staff received a letter from you accepting coverage of the discharge under *Water Quality Order 97-10-DWQ, General Waste Discharge Requirements for Discharges to Land by Small Domestic Wastewater Treatment Systems* (hereafter General Order).

Based on the findings of the original WDRs, information from self-monitoring reports and facility file, the discharge meets the conditions of the General Order. The discharge is hereby covered under *Water Quality Order No. 97-10-DWQ, General Waste Discharge Requirements for Discharges to Land by Small Domestic Wastewater Treatment Systems*. The facility is assigned Notice of Applicability (NOA) No. 97-10-DWQ-R5170.

The following requirements contained within the General Order apply to the subject discharge:

1. All Section A Prohibitions,
2. Section B Requirement Nos. 1.a-1.d, 3.b-3.c, and 6.a-6.d;
3. All Section C Ground Water and Surface Water Limitations;
4. Section D Provision Nos. 1.a-1.v, and 3.a-3.b; and
5. All Attachment B Standard Provisions and Reporting for Waste Discharge Requirements.

The following sections of Attachment A, Monitoring and Reporting Program (MRP) 97-10-DWQ, apply to the discharge:

1. Activated Sludge Systems Monitoring
2. Disposal Monitoring, Pond/Basin Monitoring
3. Reporting

LOCATION

The Discharger operates the WWTF in Sections 20 and 21, T10S, R24E, MDB&M. The site lies within the Kings River Hydrologic Unit (552.00) of the Tulare Lake Basin. The surface water drainage for this area contributes to Sycamore Creek, a tributary of the Kings River.

The *Water Quality Control Plan for the Tulare Lake Basin, Second Edition* (hereafter Basin Plan), designates beneficial uses, establishes water quality objectives, and contains implementation programs and policies to achieve water quality objectives for all waters of the Basin.

DESCRIPTION

The WWTF consists of an extended aeration activated sludge package treatment plant and three evaporation/percolation ponds. The design flow is 34,000 gallons per day (gpd), with an actual average flow of 9,000 gpd.

The existing and potential designated beneficial uses of the Kings River are municipal and domestic supply, agricultural supply, hydropower generation, water contact recreation, non-contact water recreation, warm freshwater habitat, cold freshwater habitat, wildlife habitat, ground water recharge, and freshwater replenishment. The Basin Plan designates the beneficial uses of groundwater as municipal and domestic supply, agricultural supply, industrial service supply, and industrial process supply.

FACILITY-SPECIFIC REQUIREMENTS

In addition to the above requirements, the Discharger must comply with the following:

1. Discharge of wastewater at a location or in a manner different from that described above is prohibited.
2. The WWTF shall be operated in accordance with the requirements contained in the General Order.
3. The waste discharge shall not enter surface waters or surface water drainage courses.
4. The Discharger shall submit the required annual fee (as specified in the annual billing issued by the State Water Resources Control Board), until the NOA is officially terminated.
